

Privest Wireless Outdoor Siren

The Privest Wireless Outdoor Siren is the all-in-one module from ABUS Security-Center. You can install this combination signal generator indoors or outdoors. The signal is transmitted to and from the alarm control panel via wireless technology.

The Privest Wireless Outdoor Siren is a combination signal generator. In the event of an alarm, the siren generates an extremely loud tone (more than 105 dB of acoustic pressure). In addition to the acoustic security system, there is a visual alarm in the form of a flashing red LED which is visible from large distances (flashing frequency: 1 Hz). It is possible to control the siren and the flashing light separately.

The stable, weather-proof housing is tampering-protected by a wall contact and a lid contact.

The power supply is already integrated in the housing (5 x CR123, 3 V lithium battery). The outside siren has a battery lifespan of up to 2 years.

Product highlights:

- Loud siren with 105 dB acoustic pressure (adjustable)
 - Optical alarm by flashing LED with adjustable frequency
 - Power supply by batteries
 - Robust, weather-proof ABS housing (protection class IP44)
 - Bi-directional wireless operation
 - Siren and flashing light can be controlled separately
 - Tamper-protection by wall contact and lid contact

Privest Wireless Outdoor Siren

Technical Data

Radio frequency	868.65 MHz AM
-----------------	---------------

Modulation	AM
------------	----

Supervision	yes
-------------	-----

Battery	5x CR123 3V lithium
---------	---------------------

Battery service life	approx. 2 years
----------------------	-----------------

Siren volume	105dB @ 1m
--------------	------------

Flash frequency	60Hz
-----------------	------

Weight	1,000g
--------	--------

Dimensions (WxHxD)	192x337x60 mm
--------------------	---------------

Operating temperature	–25°C – 60°C
-----------------------	--------------

IP protection class	IP44
